This report was prepared for the Clearwater River Watershed District (CRWD) to provide a progress report of Watershed Management Plan (WMP) Implementation activities in the District. The report summarizes 2019 hydrologic, hydraulic and water quality monitoring data and provides an analysis of progress towards goals in the context of the District’s watershed management activities.

In 2019, the CRWD made progress towards goals established in the Watershed Management Plan by doing the following:

- Secured funding for and constructed the $2.8 million Nitrogen Mitigation System for the Clearwater Harbor, Hidden River Waste Water Treatment System forward including initiating the Project.
- Worked through staff transitions, changed office locations and Comprehensive Planning for the next 10 years.
- Continued to monitor water quality, hydrology, and hydraulics to track water quality trends and the effectiveness of existing management strategies. These actions help to improve efficiencies of implementation of projects.
- Completed maintenance on existing projects as noted in annual project inspections.
- Continued education and outreach efforts including an update of the Districts Web Site (in progress).
- Conducted the annual strategic planning session in March to evaluate WMP implementation, performed adaptive management and identified additional needs. This includes identifying additional projects and continuing to apply for grant dollars to fund other CRWD projects.
- Provided $10,000 in cost share and technical services to support a Wright SWCD project to stabilize a ravine and reduce sediment and nutrient loading to Lake Augusta.
- Stabilized the Pleasant Lake Outlet Channel to reduce sediment and nutrient loading to downstream Clearwater Lake.

At District’s annual planning session in March, the Board set the direction for 2020. The major tasks upcoming for the District include:

- Finalize the update the WMP (last updated in 2009).
- Continue work on the task force to address potential water quality threats to two trout streams, Theil Creek and Fairhaven Creek.
- Implementation projects and programs towards achieving water quality goals.
- Continue monitoring, inspection and maintenance, and civic engagement programs.
- Continue to coordinate with lake associations, county and state government on AIS issues.
Year 1 System Commissioning for the Nitrogen Mitigation Project for the Clearwater Harbor / Hidden River waste water systems.

Significant hydrologic, hydraulic and water quality findings in this report include the following:

1. Annual precipitation and runoff was extremely high, ranging from 34.19 inches in Kimball, 38.31 inches in Watkins, to 41.92 in St. Cloud (30 year normal for St. Cloud is 27.73 inches).
2. Early ice out, early warm temperatures sparked significant algae blooms even in lakes with typically good water quality.
3. Of the lakes monitored in 2019, all met the clarity standard, even with significant blooms.
4. While long term lake water quality is stable to improving in all CRWD lakes, some higher TP concentrations were measured this year in Lake Betsy and Clear Lake. Lake Betsy water quality has improved dramatically since implementation activities began in 2009 (139 ug/L in 2019 vs 269 for the 10-year average during the TMDL study). Water quality in Cedar Lake has stabilized below the water quality goal since work began in 2007.
5. Lake Augusta, impaired for nutrients, met the water quality TP standard 5 of the past 10 years monitored (2009-2018), and the 10-year average continues to improve and is 40.68 ug/L, just shy of the 40 ug/L standard (it was 42 in 2017 and 40.8 in 2018).
6. While Clear Lake water quality TP continued to improve and saw a record low concentration of 71 ug/L TP and three years of stable to improving water quality, just above it 60ug/L state standard in 2017, algae blooms plagued the lake in 2018 accompanied by a higher TP average in 2018 of 131 ug/L TP.
7. The 10-year average summer surface TP concentration in Union Lake remains below the 40ug/L TP standard.

Information on the status of existing CRWD projects and water quality in the District can be found online at http://www.crwd.org/.
1.0 Introduction

1.1 MISSION STATEMENT
The District’s mission is to promote, preserve and protect water resources within the boundaries of the CRWD in order to maintain property values and quality of life.

1.2 DISTRICT HISTORY
The area encompassed by the CRWD is rich in soil and water resources. The presence of those resources has encouraged the growth of two economic mainstays in this Central Minnesota territory – farming and tourism. Around these basics have grown the communities that support their needs. As population and industry grow, those priceless resources, which we often take for granted, may deteriorate.

In the 1960s and early 1970s, those who fished and enjoyed the waters of the Clearwater River Chain of Lakes began to notice a decrease in the clarity of those waters, an increase in the number of rough fish (bullheads and carp), and an increase in the growth of algae on the surface of the water. Property owners sought new tests from scientists interested in water quality. Those tests revealed that the nutrient content of the water had increased substantially since 1946 – phosphorus was coming into the Clearwater Lake at a rate almost double the rate considered damaging.

The lakes through which the Clearwater River flowed were aging much too quickly. That process, which is a natural phenomenon called “eutrophication,” was being helped along at an alarming rate via pollution entering the river system from cities, farmland, private property, and industry.

Further reports concluded that the rate of phosphorus input could be reduced by as much as 50% if the cities of Watkins, Kimball, and Annandale, and the Modern Craftsmen’s Milk Association of Watkins installed on-land waste treatment systems instead of discharging sewage and industrial effluents into the Clearwater River and Warner Creek. In addition, if the phosphorus input from all non-point sources (such as septic tanks, agricultural wastes, storm water runoff, and soil erosion) could be significantly reduced, water quality in the watershed could be restored to an acceptable level.

After a lengthy series of meetings and legal research, those concerned came to the conclusion that only a watershed district, with its powers of enforcement and its abilities to assess and to obtain federal and state funding, could tackle the pollution problem in the Chain of Lakes. The CRWD was the culmination of years of hard work and the beginning of many more years of work aimed at undoing some of the damage done over a long period of time to one of our most important resources – our lakes and streams.
The CRWD was established as a unit of local government on April 9, 1975, through citizen petition by order of the Minnesota Water Resources Board, acting under authority of Chapter 112, MSA (the Minnesota Watershed Act). Though the original thrust of the CRWD and its five-member Board of Managers was the improvement of water quality in the Clearwater River Chain of Lakes, its scope has grown into a complete program of water management within its boundaries.

1.3 DISTRICT INFORMATION
In February of 2019, the District authorized a move of the physical address, the mailing address and changed meeting locations, this information is reflected in the table below.

<table>
<thead>
<tr>
<th>Physical Address</th>

The current Board members and staff are listed on the District’s web site.

1.4 MONITORING & REPORT OBJECTIVES
The Clearwater River Watershed District’s (CRWD’s) ongoing monitoring program—started in 1980—is critical to track long term water quality and hydrologic trends. This report summarizes data to evaluate progress towards water quality goals through program/project implementation. This allows the CRWD to optimize costs and benefits of natural resource protection programs within the District. The 2019 monitoring plan is summarized in Appendix A, monitoring locations and impaired waters are summarized in Figure 1-1.

The objectives of the Water Quality Monitoring and Watershed Management Plan Implementation Status program are:
1. Track progress towards water quality goals for impaired waters by:
   a) Measuring water quality trends in lakes and streams and pollutant loads.
   b) Tracking programs and projects implemented.
   c) Evaluating water quality in the context of programs/projects implemented.
2. Fill data gaps identified in the TMDLs.
3. Continue to provide baseline water quality data and calibration data sets to refine TMDL load reductions.
4. Track long-term trends in all CRWD waters monitored ensuring early detection of declining trends. The appendices summarize historical lake water quality data.

5. Provide recommendations for ongoing programs, projects and watershed management strategies based on data.
Figure 1: Impairments and water quality monitoring locations in the Clearwater River Watershed District.

Fund Balances - January 1, 2019 $949,620
Fund Balances - December 31, 2019 $1,362,765

Note: The District conducts an independent audit annually; audited financial statements are available for public review at the District’s office during normal business hours, at the Annandale Public Library, and online at: [https://www.crwd.org/uploads/1/3/0/2/130247478/annual_financial_report_-_crwd_2019.pdf](https://www.crwd.org/uploads/1/3/0/2/130247478/annual_financial_report_-_crwd_2019.pdf). The above information can be found on pages 10 of the audit report.

The activities of the CRWD are funded by a combination of an ad valorem tax levy (based on property values within the CRWD), special assessments, and grants. Funds raised by special assessment can only be used for the specific purpose they were levied for. The CRWD budget, corresponding levies and special assessments are approved after public notice and hearing, as dictated by statute. This public hearing is normally held at the September regular meeting. A detailed budget is available for public review at the CRWD office.
3.0 Progress Towards Water Quality Goals | Status of CRWD Projects and Programs

The CRWD Watershed Management Plan (WMP) identifies the upper watershed (upstream of Lake Betsy) as the highest priority for implementing both capital projects and programmatic BMPs. Because of the flow-through nature of the Clearwater Chain of Lakes, water quality in upper watershed lakes like Clear Lake and Lake Betsy is the primary driver of water quality in downstream lakes like Clearwater Lake. Nutrient loads from upper watershed lakes and their tributary watersheds drive impairments in lakes further downstream. Clear Lake, Lake Betsy, and the tributary watersheds are targeted for intensive BMPs to not only improve water quality in those lakes, but to also reduce the load to downstream water bodies. All lakes will eventually be targeted, but the greatest impact will be achieved for the lowest cost by initially focusing the efforts on improvements in the upstream end of the District and working downstream.

3.1 PROCESS

The CRWD WMP is specific in its focus: implement the identified projects and programs in high priority geographical areas. The District makes annual adjustments to further focus and refine management activities. The Board and staff review this report, compare findings to the WMP, and then prioritize projects and programs. They typically select one-three projects and programs to focus on in the coming year. The annual planning is based on remaining programs and projects identified in the Plan, water quality monitoring findings as well as other opportunistic projects identified during the year. This on-going strategic planning keeps the CRWD focused and efficient.

3.2 YEARLY SUMMARY OF PROGRESS | STATUS OF PROJECTS AND PROGRAMS

The following section summarizes year by year strategy as well as programs and projects undertaken since the plan was adopted:

2009

▲ Prioritized six projects from the overall TMDL Implementation Plan
  • City of Kimball Stormwater Retrofit
  • Lake Betsy Internal Load Management
  • Watkins treatment area
  • Targeted Fertilizer Application Project
  • Kingston Wetland Restoration
  • Clear Lake South Sand Filter/ Weir
▲ Applied for grants for each of prioritized projects, received grant for Kimball stormwater (Kimball Stormwater would eventually be broken into two phases, grant for Phase I was received in 2009).
Implemented agricultural BMPs identified in the TMDL Implementation Plan in upper watershed.
Conducted additional monitoring, including collection of lake bottom samples and sediment phosphorus release analysis in Clear and Betsy Lakes.
Implement education program including watershed tours and outreach to lake associations, farmers and local government units.

2010
- Applied for and received Section 319 grant for Kingston Wetland Restoration and Targeted Fertilizer Application Project.
- Applied for Watkins Area Restoration Grant and Lake Betsy Internal Load, grants not funded.
- Applied for and received CCM funding for streambank restoration.
- Implemented BMPs identified in the TMDL Implementation Plan.
- Conducted additional monitoring to fill in data gaps and continue to assess internal loading in District lakes, including collection of lake bottom samples and sediment phosphorus release analysis in Augusta and Scott Lakes.
- Implement education program including watershed tours and outreach to lake associations, farmers and local government units.
- Implemented Fertilizer Field Trial Project.

2011
- Constructed Kimball Stormwater Project (now known as Phase I).
- Applied for and secured a grant for Kimball Stormwater Phase II.
- Implemented BMPs identified in the TMDL Implementation Plan.
- Applied for and received CCM funding for streambank restoration.
- Conducted supplemental water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to track progress and focus implementation efforts.
- Implement education program including watershed tours and outreach to lake associations, farmers and local government units.
- Implemented Fertilizer Field Trial Project.

2012
- Applied for and secured one grant for two projects in the Cedar Lake Subwatershed:
  - Highway 55 project
  - Swartout Wetland Project
- Completed Clear Lake South Sand Filter/ Weir.
- Implemented BMPs identified in the TMDL Implementation Plan.
- Applied for and received CCM funding for streambank restoration.
- Conducted supplemental water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.
▲ Implement education program including watershed tours and outreach to lake
associations, farmers and local government units.
▲ Implemented Targeted Fertilizer Project.

2013
▲ Advanced implementation for priority projects:
  • Completed design of Kimball Phase II stormwater retrofit; worked to complete
  permitting.
  • Further developed feasibility for Betsy Lake Internal Load Management.
  • Feasibility study of Lake Augusta Internal Load management options.
  • Lake Augusta AIS Project.
▲ Applied for and received CCM funding for streambank restoration.
▲ Secured funding for 20 CCM crew hours for stream bank stabilization for 2014.
▲ Implemented BMPs identified in the TMDL Implementation Plan.
▲ Conducted supplemental water quality and hydrologic monitoring in accordance with
recommendations of the implementation plan throughout the District to monitor project
performance and better focus implementation efforts.
▲ Implement education program including watershed tours and outreach to lake
associations, farmers and local government units.
▲ Began Kingston Wetland Restoration Project.
▲ Implemented Targeted Fertilizer Project.

2014
▲ Advanced implementation for priority projects:
  • Completed 90% of construction for Kimball Phase II stormwater retrofit.
  • Conducted Feasibility Study Betsy Lake Internal Load Management.
  • Completed design and permitting for two Cedar Lake watershed projects,
construction to begin early in 2015
  • Continued implementation of Targeted Fertilizer Application Program, early
reports from Co-Ops indicate enrollment is approaching goals.
▲ The Targeted Fertilizer Application Program was Awarded:
  • Minnesota Association of Watershed District Program of the Year
  • Environmental Initiative Natural Resources Award.
▲ Applied for both rounds of MN Board of Water and Soil Resources’ (BWSR) Targeted
Watershed Implementation Program to complete the plan implementation; CRWD was
not selected for either grant.
▲ Applied for a Clean Water Legacy (CWL) grant for the Watkins Project.
▲ Applied for Section 319 funds for the Alternative Tile Intake Demonstration Program
▲ Measured and recorded positive results of the Kingston Wetland Restoration Project
including reduced soluble phosphorus export from the wetland and improved dissolved
oxygen concentrations downstream.
Conducted supplemental water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.

Implemented education program including watershed tours and outreach to lake associations, farmers and local government units.

2015

Received a Clean Water Legacy Grant for the Watkins project and began design and permitting.

Completed final project closeout for Kimball Phase II.

Completed construction for the Highway 55 portion of the grant-funded Cedar Lake Watershed Protection and Improvement Project.

Achieved substantial completion Swartout portion of the grant-funded Cedar Lake Watershed Protection and Improvement Project.

Awarded 319 funds for the Alternative Tile Intake Demonstration Program and began program implementation.

Continued to enroll landowners in the Targeted Fertilizer Application Program.

Reported positive results of the Kingston Wetland Restoration Project in the final report and maintained sediment forebay.

Continued to implement rough fish management (removal and migration barriers).

Implemented agricultural best management practices via existing District cost-share and/or partnering with other entities (ex SWCDs).

Conducted water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.

Continued Aquatic Invasive Species (AIS) work with lake associations as initiated by lake associations. Actively participated with county-level AIS activities.

Implemented education program including school district outreach via partnership with Sauk River Watershed District, watershed tours and outreach to lake associations, farmers and local government units.

2016

Continued implemented 319 funded Alternative Tile Intake Demonstration Program.

Completed and submitted the final project report to the MN Pollution Control Agency.

Continued to implement rough fish management (removal and migration barriers).

Implemented agricultural best management practices via existing District cost-share and/or partnering with other entities (ex SWCDs).

Continued annual project and program inspections and maintenance.

Conducted water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.

Continued Aquatic Invasive Species (AIS) work with lake associations as initiated by lake associations. Actively participated with county-level AIS activities.
Continued education program including school district outreach via partnership with Sauk River Watershed District, watershed tours and outreach to lake associations, farmers and local government units.

2017

- Completed construction of the Watkins stormwater management project.
- Implemented agricultural best management practices via existing District cost-share and/or partnering with other local entities.
- Conducted water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.
- Continued Aquatic Invasive Species (AIS) work as initiated by lake associations. Actively participated with county-level AIS activities.
- Continued to implement education program including school district outreach via partnership with Sauk River Watershed District, watershed tours and outreach to lake associations, farmers and local government units.
- Inspected District projects to assess maintenance needs and function
- Conducted active maintenance on District projects including
  - Lake Augusta Erosion Control Project
  - School Section Lake Outlet
- Biological monitoring conducted at Kinston Wetland showing the Clearwater River met state IBI standards.

2018

- Continued to make progress on the $3 million Nitrogen Mitigation Project in terms of community consensus, completion of design, and securing funding.
- Lake bottom cores were collected in Swartout Lake to measure P release rates. Preliminary results indicate that alum dosing may not be the ideal management approach for Swartout Lake. The results will be published in 2018.
- Implemented agricultural best management practices via existing District cost-share and/or partnering with other local entities.
- Conducted water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.
- Continued Aquatic Invasive Species (AIS) work as initiated by lake associations. Actively participated with county-level AIS activities. Specifically, the Clearwater Lake Property Owners (CLPO) AIS project moved forward, and a petition for Bass Lake AIS management was advanced.
- Supported Meeker County in reconstruction of County Road 17 by offering review and technical support for erosion control and improved erosion management. The project location was within the District’s priority zone for sediment and nutrient management.
▲ Continued to implement education program including school district outreach via partnership with Sauk River Watershed District, watershed tours and outreach to lake associations, farmers and local government units.

▲ Inspected District projects to assess maintenance needs and function:
   - Swartout Iron Enhanced Sand Filter Repair and Maintenance
   - School Section Lake Outlet Maintenance
   - Completed Augusta Erosion Control Maintenance and Repair

▲ Partnered with the Clear Lake Property Owners Association to conduct additional monitoring on Clear Lake Tributaries to advance the initiation of projects intended to improve water quality in Clear Lake.

▲ Welcomed Dale Homuth to the Board of Managers. Manager Homuth is a retired DNR employee with significant local and historical knowledge of the District and its resources.

▲ Transitioned staff due to the departure of our administrative team. The District Administrator took another position and his assistant (the prior administrator) retired. The District pivoted to cover accounting duties with a contractor to provide space to make a thoughtful decision about staffing going forward. The new accounting contractor provides separation between District Administration and accounting as the two entities are separate. The new administrator was hired in November 2018.

2019

▲ Constructed the $2.8 million Nitrogen Mitigation Project after securing $2.1 million in funding from a PSIG.

▲ Conducted water quality and hydrologic monitoring in accordance with recommendations of the implementation plan throughout the District to monitor project performance and better focus implementation efforts.

▲ Continued Aquatic Invasive Species (AIS) work as initiated by lake associations. Actively participated with county-level AIS activities. Specifically, the petition from the Bass Lake Association was formalized into a District Project.

▲ Continued to implement education program including school district outreach via partnership with Sauk River Watershed District, watershed tours and outreach to lake associations, farmers and local government units.

▲ Restored and stabilized the Pleasant Lake Outlet Channel.

▲ Inspected District projects to assess maintenance needs and function, though high water levels prohibited access to several projects. A full inspection report will be provided in 2020.

▲ Partnered with Wright SWCD to stabilize a ravine which was delivering large sediment loads to Lake Augusta.

▲ Continued our partnership with the Clear Lake Property Owners Association to conduct additional monitoring on Clear Lake Tributaries to advance the initiation of projects intended to improve water quality in Clear Lake.

▲ Again, transitioned staff due to the departure of our administrative team. After the District Administrator took another position and his assistant (the prior administrator) retired mid-2018. The Administrator position was filled for a brief time before being
again vacated in June 2019. In response the District added administrative duties to their long-time engineer and her support staff.

Table 3—1: 2019 Summary of Progress | Status of Projects and Programs

<table>
<thead>
<tr>
<th>Activity</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Advisory Committee</td>
<td>Per MN Statute 103D, the CRWD Board of Managers has appointed an advisory committee. More information on the committee, include meeting minutes, can be found at: <a href="https://www.crwd.org/advisory-committee.html">https://www.crwd.org/advisory-committee.html</a></td>
</tr>
<tr>
<td>Annual Project Inspections</td>
<td>On an annual basis, the CRWD conducts a review of the operational status of all projects the CRWD owns, operates and/ or maintains on the landscape. At a minimum visual inspection of individual project’s components are performed, with more in-depth inspections performed as warranted. From this, actions items needed to maintain operational effectiveness are determined. The results of these inspections are summarized annual in a Project Inspection Report, which serves to provide an annual status update to the CRWD Board of Managers. A copy of report can be viewed at: <a href="https://www.crwd.org/publications-and-reports.html">https://www.crwd.org/publications-and-reports.html</a> Status of projects and programs that do not physically exist on the landscape are covered below.</td>
</tr>
<tr>
<td>Aquatic Invasive Species (AIS) Treatment Programs</td>
<td>The CRWD has been, from time to time, petitioned to established programs for the identification, management and treatment of AIS in certain CRWD waters. These programs are funded by special assessments, and the lake associations on each lake undertake the management of the treatment programs via agreement with the CRWD; the CRWD acts as a fiscal agent on all projects. In addition, the CRWD actively participated with county-level AIS activities, principally by serving in an advisory role. Bass Lake Association petition was initiated into a project.</td>
</tr>
<tr>
<td>Bog Control Projects</td>
<td>In response to high water levels in the mid-1980s that caused severe floating bog problems on Augusta, Clearwater, and Grass Lakes, the CRWD set up two bog control projects with the cooperation of the lake property owners involved. These projects included acquisition and improvement of access areas for bog removal, and the funding (via assessment) and process for removal of floating bogs deemed harmful. The CRWD works in conjunction with the Minnesota Department of Natural Resources as well as other local authorities in removal of bogs from choke points on these three lakes in order to ensure river flow is not restrict such that flooding could result. Bog removal by the CRWD is governed by CRWD Policy. Minimal bog activity was noted in 2019.</td>
</tr>
<tr>
<td>Education and Outreach Program</td>
<td>Program is a collection of activities, events, publications, etc. that fall under various projects and programs of the CRWD. Provides means to: * Inform citizens on CRWD activities * Encourage involvement and ownership of water-resource issues * Discover citizen concerns * Establish and test methods Activities completed in 2019 under this program include: * Updated the District’s web site (ongoing) * Several CRWD advisory committee meetings.</td>

|                          | - Inventive program focused on variable rate fertilizer application and alterative tile intake programs.  
|                          | Visit: [https://www.crwd.org/incentives.html](https://www.crwd.org/incentives.html) to learn more about these incentive offerings. |
| Partnerships             | **Mississippi River (St. Cloud) Watershed WRAPS**  
|                          | Collaborated with partners on this project where possible. The CRWD remains committed to working with its partners on the watershed restoration and protection strategies report process.  |
|                          | **SWAG**  
|                          | The District is partnered with Sherburne SWCD to conduct SWA monitoring under an MPCA grant. The work is on-going.  |
| Project-specific         | **Agricultural Cost-Share BMPs**  
|                          | Continued targeted implementation of agricultural cost-share best management practices (BMPs) in high priority locations identified in TMDL studies.  |
|                          | The Federal Section 319-funded Alternative Tile Intake Project and the Clearwater River Restoration and Protection Phase II Project (Clean Water Partnership-funded) both concluded in 2019 successfully.  |
| Rough Fish Management Program | The CRWD continues to implement rough fish management strategies (principally removal and migration barriers) in areas of the CRWD where management funding has been established. In addition, several test net surveys were conducted to determine if lake seining was warranted in 2016. Open water seining was conducted on Lake Louisa in fall 2016 with low rough fish pull numbers.  
|                          | The Highway 55 Fish Barrier Removal contract, awarded in 2018, could not be implemented in 2018 or 2019 due to high water levels. The work is still planned.  
|                          | A repair of the fish migration barriers is planned for 2020.  
|                          | A report of a carp virus has potentially reduced carp populations in Swartout Lake, which is tributary to Cedar Lake. As water levels allow, fisheries surveys will be conducted.  |
| Water quality monitoring | Conducted water quality and hydrologic monitoring in accordance with recommendations of the WMP throughout the District to monitor project performance and better focus implementation efforts. See also SWAG Grant implementation for 2019 and 2020. |
### 3.3 SUMMARY OF PRIORITY PROJECTS

The CRWD has implemented several major projects to achieve water quality goals; status is shown below.

**Table 3—2: Priority Implementation Projects**

<table>
<thead>
<tr>
<th>Project</th>
<th>TP Reduction (lbs/yr)</th>

</tr>
<tr>
<td>Expand Education Program</td>
<td>N/A</td>
<td>N/A</td>
<td>Incorporated in grant funded scopes of work are efforts to expand the CRWD’s Education Outreach programs. The CRWD had a strong relationship with Lake Associations and hosts educational events that primarily target adults. The education program was expanded to include social media outreach as well as school age children in the community.</td>
</tr>
<tr>
<td>Watkins Area Stormwater Treatment</td>
<td>796</td>
<td>$645,882</td>
<td>Land was acquired for this project in mid-2000s. An initial grant application for $351,906 scored highly but was not selected in 2009 due to amount requested. Conducted additional feasibility work and completed another grant application which was not awarded. The District received grant award in 2015 and began design and permitting. Construction was substantially completed in 2017, and finalized in 2018. <a href="https://www.crwd.org/watkins-area-stormwater-treatment-project.html">https://www.crwd.org/watkins-area-stormwater-treatment-project.html</a></td>
</tr>
<tr>
<td>Alternative Tile Intake</td>
<td>TBD</td>
<td>$88,000</td>
<td>A 319 grant to promote the use of alternative tile intakes to reduce sediment, nutrient and bacteria concentrations in the upper watershed. The project, started in 2015, wrapped up in the summer of 2018 with some modifications due to low uptake of the practice. However several other projects which promote load reductions were implemented. <a href="https://www.crwd.org/alternative-tile-intake-project.html">https://www.crwd.org/alternative-tile-intake-project.html</a></td>

4.0 Managers’ Plan of Work for 2020

4.1 PLAN OVERVIEW
The CRWD Board of Managers approved the following plan at their March 11th, 2020 regular meeting. The scope of this plan is limited to a high-level overview, providing a summary of work envision by the CRWD Board of Managers for the year. Throughout the year, new information and opportunities may arise; as such, implementation of the plan may be altered at any time. While focused only on 2020, the plan factors in long-term planning to ensure the District remains on task to accomplish its mission and purposes.

Many work items covered below are too complex to be completely covered in a single, all-encompassing work plan. As such, many of these items have their own stand-alone work plans.
### PLAN DETAILS

Table 4-2 provides detail for each of the five categories that make up the Managers’ Plan of Work for 2020.

Clearwater River Watershed District

2019 Annual Report

Appendix A: 2019 Monitoring Program
TO: BOARD OF MANAGERS
FROM: DISTRICT ENGINEER
DATE: 4/16/2019
SUBJECT: PROPOSED 2019 WATER QUALITY MONITORING PROGRAM

Introduction
The Clearwater River Watershed District has conducted an annual water quality monitoring program at select locations throughout the watershed since 1981 in an effort to assess District progress towards water quality goals, track long-term water quality trends, and evaluate effectiveness of existing water quality improvement projects and programs. The proposed 2019 program is in line with previous efforts however has pulled back in some areas to reduce scope.

Baseline Monitoring: Lakes
The recommended 2019 lake monitoring includes the 9 lakes covered by the SWAG grant (except OP), and Pleasant, Bass and School Section recommended additional (Table 2) for a total of 12 lakes.
- Aquatic vegetation survey schedule (by others) is shown in Table 4.

Baseline monitoring: Streams
The recommended 2019 stream monitoring includes the 9 streams shown in Table 5 (no water quality sample at 10.5).
- All streams will be monitored monthly April to October (Parameters include: temperature, dissolved oxygen, pH, specific conductance and flow, ortho-phosphorus, total phosphorus and total suspended solids).
- Continuous water level monitoring will be recorded using pressure transducers at stations CR28.2, CR16.7 (Fairhaven Dam) CR10.5, CD 20-1.0, SSW04 (Illsley Ave), Theil Creek and School Section Lake.

Appendix B: 2019 Report Cards
METHODS FOR DETERMINING VEGETATION & FISH HEALTH

Overview
Biodiversity is important in maintaining a healthy lake ecosystem. Biodiversity is considered to be a principle driver of ecosystem function and critical to ecosystem resilience and stability. A diverse ecosystem provides a number of services such as nutrient recycling, improved water quality, and increased recreational opportunities. Human disturbances often lead to a decrease in species diversity resulting in a weakening and/or loss of support to the ecosystem services provided by healthy biotic community.

The development of health assessment indices have provided a means in which natural resources managers can evaluate and monitor the health of a lake’s biological community to help focus restoration and preservation efforts. The species that make up a community vary in their tolerance to human disturbances, therefore, as the episodic and cumulative disturbances occur to a system a decrease in species richness and a shift to species that are very tolerant to disturbance. Assessment tools developed by the MnDNR use these tolerance differences to relate the relative health of a given lake. Specifically, different sets of tools have been developed to relate the health of the fish community (Fish IBI) and another set of tools for the vegetation community (FQI).

Floristic Quality Index
The Floristic Quality Index (FQI) is a vegetation health assessment tool that is based on a metric of species richness and a Coefficient of Conservatism (C), which is a score (0 - 10) that relates a species site fidelity and tolerance to disturbance. Thus, species that have narrow habitat ranges and/or low tolerance to stress have high C-values. Therefore, the more species observed in a lake and the greater the C-values the greater the system health.

FQI assessment was designed to allow for health assessment from various community sampling techniques. Three different survey methods can be used: Minnesota Biological Survey methods, MnDNR transects or point intercept surveys (most common). All three methods have limitations yet all are relatively good at capturing and evaluating the health of the vegetation community.

Due to natural differences in species composition between deep and shallow lakes and ecoregions, two unique sets of thresholds were developed for FQI scoring for the North Central Hardwoods ecoregion (Table 1). The MnDNR has performed at least one survey and FQI assessment on all of the CRWD lakes presented in this appendix. Each lake report card shows the most recent FQI score for each lake and how it relates to the impairment thresholds presented in Table 1. It should be pointed out that the report cards only show FQI assessments conducted by the MnDNR, and therefore do not include any FQI assessments based on surveys performed by CRWD or other parties.

<table>

</tr>
<tr>
<td>Impaired</td>
</tr>
</tbody>
</table>

Fish Index of Biotic Integrity
The Fish IBI is comprised of multiple metrics that integrate aspects of species richness, community assemblage, and trophic composition. The combining of all individual metrics results in a single score that relates the relative health of the fish community with healthier systems having greater overall scores. Low scores are typically associated to imbalanced communities filled with tolerant species and high scores are typically received when communities are balanced and filled with intolerant species.

Fish IBI sampling includes trap and gill net surveys along with nearshore backpack electrofishing and beach seining. Together these various sampling gears are able to capture information from various habitats throughout a lake and also target all fish species.

Minnesota lakes that fall within lake classes 20 - 43 (Schupp lake classification) have been partitioned into four distinct Fish IBIs. Lake class groups are clustered together using eight lake attributes that account for the expected variability of a fish community due natural phenomenon (Table 2).

<table>
<thead>
<tr>
<th>Table 2: Minnesota Department of Natural Resources fish IBI tool classification.</th>
</tr>
</thead>
<tbody>
<tr>
<td>IBI Tool</td>
</tr>
<tr>
<td>2</td>
</tr>
<tr>
<td>4</td>
</tr>
<tr>
<td>5</td>
</tr>
<tr>
<td>7</td>
</tr>
</tbody>
</table>

Due to these expected differences and unique IBIs each tool has its own set of thresholds to generalize the relative health of a lake’s fish community (Table 3).

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>Classification</td>
</tr>
<tr>
<td>Exceptional</td>
</tr>
<tr>
<td>Impaired</td>
</tr>
</tbody>
</table>

The MnDNR has performed Fish IBI assessments on six lakes throughout the CRWD: Cedar, Betsy, Louisa, Clearwater, School Section, and Bass. The lake report cards for each of these lakes present the Fish IBI score and how it relates to the impairment thresholds presented in Table 3.

More information on Fish IBI methodology can be found on the MnDNR’s website:
http://www.dnr.state.mn.us/waters/surfacewater_section/lake_ibi/index.html
QUICK FACTS
- Littoral Area: 251 acres
- Residence Time: 1477 days
- Surface Area: 251 acres
- Subwatershed Area: 1,094 acres
- Maximum Depth: 9 feet

Pleasant Lake

Quick Facts:
- Littoral Area: 260 acres
- Surface Area: 597 acres
- Subwatershed Area: 4,325 acres
- Maximum Depth: 74 feet
- Upstream Waters: None

Fish Dominant:
- Bluegill, Yellow Bullhead, Northern Pike, Pumpkinseed Sunfish

Vegetation Dominant:
- Curlyleaf, Coontail, chara species, Eurasian watermilfoil

Status:
- Not impaired

Fish Health (IBI):
- Impaired
- Supporting
- Exceptional

Vegetation Health (FQI):
- Impaired
- Supporting
- Exceptional

Sediment P Release (mg/m²/day):
- Low
- Moderate
- High

Fish Health (IBI) has not been assessed
Vegetation Health (FQI) has not been assessed
Sediment release rate has not been assessed

To Do List:
- Manage watershed loads
- Protect water quality
- Operate outlet to minimize flooding

Sample date: 8/21/2017

QUICK FACTS

- **Littoral Area**: 188 acres
- **Surface Area**: 193 acres
- **Subwatershed Area**: 1,843 acres
- **Maximum Depth**: 12 feet
- **Upstream Waters**: None

**Common Fish**
- Black bullhead
- Bluegill
- Northern Pike

**Dominant Vegetation**
- Northern water milfoil
- Illinois pondweed
- Muskgrass

**Invasive Species**
- Curly-leaf pondweed

**Status**
- Not impaired

TO DO LIST
- Operate outlet to minimize flooding
- Protect water quality

**SCHOOL SECTION LAKE**

**Fish Health** (IBI)
- Impaired

- Exceptional

**Vegetation Health** (FQI)
- Impaired
- Supporting
- Exceptional

**Sediment P Release** (mg/m²/day)
- Low
- Moderate
- High

*Sample date: 8/18/2008
*Sample date: 8/11/2011

*Sediment release rate has not been assessed
**SCOTT LAKE**

**QUICK FACTS**
- **Littoral Area**: 52 acres
- **Residence Time**: 12 days
- **Surface Area**: 80 acres
- **Subwatershed Area**: 51,000 acres
- **Maximum Depth**: 23 feet

**Upstream Waters**: Clearwater River, Lake Betsy, Union Lake

**Common Fish**: Black Crappie, Bluegill, Channel Catfish, White Sucker

**Dominant Vegetation**: No Recent Survey

**Invasive Species**: Curly-leaf pondweed

**Status**: Impaired, TMDL Completed 2009

**TO DO LIST**
- Rough fish management
- Manage upstream loads
- Internal load management study
