

504. Project Inspection Program

Purpose

The following policy has been adopted by the Clearwater River Watershed District (CRWD) Board of Managers to set standards for its project inspection program (hereafter referred to as “Program”). Project inspections are performed to provide status updates and recommendations on maintenance and modification needs for CRWD projects on the landscape.

Standard 1: Project inspections are to be completed on an annual basis, no later than June 15th.

Standard 2: Inspections must, at a minimum, undertake the following:

- Visual inspections of all CRWD projects on the landscape, sans cost-share projects where operation & maintenance are the purview of a separate entity
- All components of each project are to be visually viewed, if possible
- Standardized field inspection forms should be used for all inspection

Standard 3: On an annual basis, the results of the year’s Program should be analysis and reported to the CRWD Board of Managers. This report should be delivered by the Board’s July regular meeting.
